

 Hospital Program

mamaRoo®

It moves like parents do.

The 4moms mamaRoo infant seat bounces up and down and sways from side to side, just like parents do when comforting their newborns.

Five unique, natural motions:

CAR RIDE

ROCK-A-BYE

OCEAN

TREE SWING

KANGAROO

The mamaRoo and Hospitals

Neonatal Intensive Care Units (NICUs) find the mamaRoo infant seat transformational in the care of their smallest, fussiest patients. The seat is currently used in over 250 hospitals nationwide.

FEATURES

Motion

The natural motions help promote longer periods of comfort and calm to facilitate testing and provide parents and caregivers some respite. Clinicians have found the mamaRoo to be especially helpful caring for babies experiencing Neonatal Abstinence Syndrome (NAS).

Recline

The mamaRoo seat adjusts to a range of recline positions to accommodate various needs. The upright position has proven to be helpful for babies suffering from reflux.

Seat

The open design of the mamaRoo seat allows newborns to sit comfortably while connected to monitors and other hospital equipment. The seat can be stationary, allowing for safe placement and removal of an infant.

Infection Control

The Classic nylon seat can be easily wiped and sanitized between patients. Seats and accessories are fully removable and machine washable.

Design

The mamaRoo is 1/3 the size of traditional swings making it ideal for smaller spaces with limited storage. It is lightweight and can easily be moved. It plugs in, so batteries are not required.

“The mamaRoo is calming because it provides an environment that is similar to still being in utero – babies feel contained, they’re moving, there’s a little bit of sound – and we find that very soothing for our babies.”

Alan Lantzy, MD
Vice Chair, Pediatrics
West Penn Hospital

What Caregivers Have to Say

“The mamaRoo has been such an asset for my nurses, especially when a mother needs to take a break or can’t be at the bedside all of the time.” – Lindsay, CCLS

“The one feature of the mamaRoo that instantly sold me is the fact it can be adjusted to recline and/or sit upright. This allows babies with varying conditions to use the seat.” – Sarah, CCLS

“The mamaRoo has been extremely helpful with our fragile NAS population by providing the vestibular input these babies need for soothing allowing for longer periods of sleep between cares. The mamaRoo also is used for our near-term or term infants who need developmentally appropriate stimuli.” –Becky, PT, DPT

“The mamaRooos are one of the best things that have been introduced to our unit in a long time.” – Tabby, RN
